## PROFESSIONAL SUMMARY

Software engineer with +5 years of experience developing scalable web applications. Proficient with Javascript, experience with different Javascript frameworks, especially with React. On the backend side, experience with Node, with frameworks such as Express and Nest. I also worked with technologies like Python and Go. Currently seeking opportunities to contribute to impactful software projects in a collaborative team environment.

## EDUCATION

### UNSTA
Lic. Social Communication
2013 - 2016

### Udemy
Self learning

### Platzi
Self learning

## SKILLS

- Languages: Javascript, Python and Go.
- Databases: PostgreSQL and MongoDB.
- Frontend: React, Angular.
- Tools: VS Code, Git, Jira.
- Backend: Express, Nest, FastAPI.

## LANGUAGUES

- Spanish ( Native)
- English ( Fluent)

## WORKING EXPERIENCE

### Fullstack Developer
Globant: Gannett Co Inc. - 2023

Gannett is a media company. I worked as a fullstack developer, but focused on the frontend. The main task was to maintain high performance standards.

- **Technologies**: EJS, Node, Express and Graphql.
- Integrated GraphQL to minimize network payloads, significantly improving frontend performance and load times.
- Prioritized Core Web Vitals during development to ensure fast, responsive, and user-friendly web experiences.
- Delivered mission-critical components for an application used during the U.S. elections, emphasizing high availability and performance.

### Frontend Developer
Globant: Manta - 2021 to 2023

Manta is a company that offered digital marketing services and SEO products, similar to Yelp reviews. Among my tasks were: improving performance, migrating the application to React 16 and leading the frontend team.

- **Technologies**: React, Angularjs, PostgreSQL, Express.
- Improved application performance by 30% through backend optimization and code refactoring. Applying techniques like: lazy loading and bundling split.
- Improved development experience by advocating for clean code and clean architecture principles across the team.
- Reduced load times by 300ms, migrating some pages to Server Side Rendering.
- Led frontend migration from Angujarjs to React 16 (React hooks).

### Software Developer
Rolling Code Studio - 2020 to 2021

Rolling code is a startup from Tucumán, Argentina. I worked in the internal product development area.

- **Technologies**: React, Express, Node, MongoDB, Web Sockets.
- Designed and implemented reusable React components to build responsive and user-friendly front-end interfaces.
- Developed a secure user authentication system using Express.js, including login, registration, and session/token management.
- Integrated MongoDB with Express.js to manage application data using Mongoose for schema modeling and CRUD operations..
- Implemented real-time communication in an Express.js applicatión using WebSockets for live updates and bidirectional messaging.
